### §7.4 Integration of Rational Functions by Partial Fractions

**In-class Activity 7.3** 

Dr. Jorge Basilio

gbasilio@pasadena.edu

#### Activity 1: Case I: distinct linear factors of Q(x)

Evaluate:

(a) 
$$\int \frac{x+1}{x^2-4x+3} \, dx$$

(b) 
$$\int \frac{3x+2}{x^3-x^2-2x} \, dx$$

### Activity 2: Case II: repeated linear factors of $\mathcal{Q}(x)$

Evaluate: 
$$\int \frac{x-2}{(x-1)(2x-1)^2} \, dx$$

## Activity 3: Case III: repeated irreducible factors of $\mathcal{Q}(x)$

Evaluate:

(a) 
$$\int \frac{2x-3}{x^3+x} \, dx$$

(b) 
$$\int \frac{1}{x^3 - 8} \, dx$$

# Activity 4: Case IV: non-proper rational functions

Evaluate:  $\int \frac{x^2 + 4}{x^2 - 4} \, dx$
